

Model deprecation registry

Complete snapshot / 20 model notices / Updated on 21 Oct 2026 at 22:27 UTC

Selected models on the OpenAI, Claude and Gemini direct APIs. This registry is not exhaustive and does not cover Azure, Amazon Bedrock or Vertex AI.

This PDF includes every entry in the published snapshot, regardless of website search or filters. Provider notices can change after download. Confirm the linked notice for your exact model and deployment.

Deprecation announced	8
No confirmed shutdown	7
Retired	5

How to use this snapshot

Compiled from the linked official provider notices. Lifecycle labels record the notice state when checked. This is a curated source review, not a live test of model availability.

Deprecation announces a change; shutdown ends access. Retired requires provider confirmation. A past planned date alone does not establish retirement.

Not before is a support lower bound or earliest possible shutdown, not a confirmed shutdown date. During gives a month without a confirmed day. Not announced means the date is unknown and does not guarantee continued availability.

Dates without a stated timezone do not specify an exact cutoff time. Aliases and dated snapshots can have different schedules. Cloud-hosted deployments can differ from these direct API notices.

Provider suggestions have not been validated by Pisama for your workflow. Evaluate behavior, API compatibility and operating conditions before switching.
